

ABHYAUNG DEEPAK HAVALE

Software Engineer - Backend Services and Full-Stack Development

+1 (551) 229-8899 | abhyaung@gmail.com | Jersey City, NJ, USA

linkedin.com/in/abhyaunghavale | abhyaung.github.io

PROFESSIONAL SUMMARY

Software engineer with 3+ years across backend services and production full-stack SaaS. Java and Spring Boot microservices with Kafka-based event processing and transactional correctness under load, plus current work shipping multi-tenant TypeScript and Next.js products covering access control and RBAC, third-party OAuth integrations, real-time audio, GPS, and AI/LLM pipelines, and PostgreSQL data modeling. MS in Computer Science.

TECHNICAL SKILLS

Backend & Distributed Systems: Java 11/17/21, Spring Boot, microservices, event-driven design, Apache Kafka, RabbitMQ, AWS SQS, REST/GraphQL/gRPC, async and queue-based processing (BullMQ), distributed transactions, ACID and consistency models, idempotency and retry design

Concurrency & Core CS: java.util.concurrent, multithreading, thread pools, CompletableFuture, synchronization, JVM tuning, data structures and algorithms

Cloud & Platform: AWS (EKS, ECS, Lambda, S3, SQS, API Gateway, CloudWatch), Kubernetes, Docker, Terraform, Jenkins, GitHub Actions, CI/CD

Data & Storage: PostgreSQL, Supabase (row-level security), MySQL, Oracle, DynamoDB, Redis, Drizzle ORM, schema design, query optimization, indexing, migrations

Security & Testing: RBAC and access-control design, Spring Security, OAuth2, JWT, third-party OAuth integrations, Playwright end-to-end tests, JUnit, Mockito, Sentry, Prometheus, Grafana

Web & Realtime: TypeScript, React 19, Next.js (App Router/RSC), Node.js, Socket.IO, Tailwind, Spring MVC/WebFlux, Hibernate (JPA), Swift (iOS plugin)

PROFESSIONAL EXPERIENCE

Software Developer, Built By The Trades - Remote, USA

Jun 2026 - Present

- Ship features across three production multi-tenant SaaS products for the trades: an AI sales-coaching platform (Next.js, Drizzle ORM, PostgreSQL, Socket.IO, Redis, BullMQ, Deepgram and ElevenLabs voice pipelines), a real-time services marketplace (Turborepo, Supabase with row-level security, Stripe, Google Maps), and a gamified sales-contest platform (Next.js, MUI, Supabase, next-intl).
- Delivered security and access-control work across the platform, including authentication and session hardening, role-based permission scoping, and multi-tenant data isolation, validated with automated tests.
- Built and maintained third-party integrations spanning CRM (OAuth), payments, mapping, and speech-to-text, including token-refresh handling, failure recovery, and normalizing data across providers.
- Integrated AI into production pipelines: wired LLM-based scoring and speech-to-text transcription into the product workflow, tuned prompts and model configuration for accuracy, and authored the supporting production database migrations.
- Built the iOS half of a background call-recorder plugin in Swift (permissions, upload and plugin registration), reaching parity with the existing Android implementation, plus geofence-exit and manual-stop event forwarding for GPS-triggered auto-recording.
- Built end-to-end product flows across the marketplace and contest platforms: a booking dispute and resolution flow, real-time messaging with auto-refresh and unread indicators, provider search and live-map dispatch, and consent/season-lock logic implemented with row-locking PostgreSQL migrations and RPCs, plus app-wide reliability work (error boundaries, 404s, loading skeletons).

Software Engineer, Insight Nova Solutions (Client: Northern Trust) - USA

Jul 2025 - Jun 2026

- Built and operated portfolio and trade-processing microservices in Java 21 and Spring Boot, deployed as containerized services on AWS EKS.
- Designed event-driven trade workflows on Apache Kafka and AWS SQS with idempotent consumers, retry policies and dead-letter handling to prevent duplicate downstream effects.
- Reduced read latency by approximately 40% by introducing a Redis caching layer and rewriting hot PostgreSQL queries against targeted composite indexes.
- Applied Java concurrency primitives (thread pools, CompletableFuture) to parallelize batch position reconciliation, raising sustained throughput by approximately 35%.
- Owned Docker and Kubernetes deployment and CI/CD pipelines with Jenkins and GitHub Actions, including rollout and rollback strategy for zero-downtime releases, and secured service and user access with Spring Security, OAuth2 and JWT.

Java Developer, Persistent Systems - Pune, India

Feb 2021 - Aug 2023

Joined as Software Engineer Trainee while completing BSc coursework; converted to full-time Java Developer.

- Built backend services for a digital lending and payments platform in Java 11, Spring Boot and Hibernate JPA, covering loan origination, customer verification and transaction processing.
- Implemented asynchronous processing with Apache Kafka and RabbitMQ for loan approvals and payment status updates, sustaining high concurrent request volume without blocking the request path.
- Guaranteed payment correctness under concurrency using Spring transaction management and ACID isolation levels, eliminating duplicate and partially-applied transactions.
- Tuned MySQL and Oracle schemas and indexing strategy for high-volume transaction tables, cutting loan-record lookup times.
- Integrated external credit-bureau and banking APIs, and maintained the build/test/release pipeline with Maven, Git, JUnit, Mockito and Tomcat.

EDUCATION

Master of Science, Computer Science - Pace University, New York, USA

Sep 2023 - May 2025

Bachelor of Science, Computer Science - Savitribai Phule Pune University, India

Jul 2019 - Dec 2022

CERTIFICATIONS

AWS Certified Solutions Architect - Associate | AWS Certified Cloud Practitioner
