PROFESSIONAL SUMMARY

Software engineer with 4 years building distributed backend systems and production AI-enabled SaaS. Deep experience with Java and Spring Boot microservices, Kafka event processing, Kubernetes/EKS and transactional systems, plus current ownership of an AI call-intelligence product using LLM scoring, speech pipelines, real-time services and native mobile capture. M.S. in Computer Science.

TECHNICAL SKILLS

Languages & Backend: Java 11/17/21, Python, TypeScript, JavaScript, SQL, Spring Boot, Spring Cloud, Node.js, FastAPI, REST, GraphQL, gRPC

Distributed Systems & Data: Kafka, RabbitMQ, AWS SQS, Redis, BullMQ, Socket.IO, PostgreSQL, MySQL, Oracle, Supabase, DynamoDB, idempotency, retries, concurrency

AI Applications: LLM application integration, agent workflows, RAG, prompt/model configuration, Deepgram STT, ElevenLabs TTS, Ollama, PyTorch, Hugging Face

Cloud & Platform: AWS EKS/ECS/Lambda/S3/SQS/API Gateway/CloudWatch, Kubernetes, Docker, Terraform, Jenkins, GitHub Actions, CI/CD

Security & Quality: RBAC, multi-tenant isolation, Spring Security, OAuth2, JWT, Playwright, JUnit, Mockito, Sentry, Prometheus, Grafana

PROFESSIONAL EXPERIENCE

Software Developer, Built By The Trades - Remote, USA | Jun 2026 - Present

- Own engineering delivery for Goose, a production multi-tenant AI sales-coaching and call-intelligence platform; ship across Next.js, TypeScript, PostgreSQL/Drizzle, Socket.IO, Redis/BullMQ and Capacitor mobile shells.
- Integrated LLM-based call scoring, prompt and model configuration, Deepgram speech-to-text and ElevenLabs voice into asynchronous transcription and analysis workflows, including supporting migrations and failure handling.
- Built the iOS background call-recorder integration in Swift (permissions, upload and plugin registration), validated locked-screen transcription, and shipped voice capture and GPS-triggered stop events into the production pipeline.
- Delivered authentication/session hardening, RBAC and tenant isolation plus CRM OAuth, payments and mapping integrations; drove automated QA gates and production release readiness across three SaaS products.

Software Engineer, Insight Nova Solutions (Client: Northern Trust) - USA | Jul 2025 - Jun 2026

- Built and operated portfolio and trade-processing microservices in Java 21 and Spring Boot, deployed as containerized services on AWS EKS.
- Designed Kafka and AWS SQS workflows with idempotent consumers, retry policies and dead-letter handling to prevent duplicate downstream effects.
- Reduced read latency about 40% with Redis caching and targeted PostgreSQL indexes; increased batch reconciliation throughput about 35% using thread pools and CompletableFuture.
- Owned Docker/Kubernetes delivery and Jenkins/GitHub Actions pipelines with rollout and rollback strategies; secured services with Spring Security, OAuth2 and JWT.

Java Developer, Persistent Systems - Pune, India | Feb 2021 - Aug 2023

- Built Java 11, Spring Boot and Hibernate services for digital lending and payments, including loan origination, customer verification and transaction processing.
- Implemented Kafka and RabbitMQ processing for loan approvals and payment status updates while keeping high-volume request paths non-blocking.
- Protected payment correctness under concurrency with Spring transactions and ACID isolation; tuned MySQL and Oracle schemas and indexes for high-volume records.

SELECTED AI PROJECTS

Local RAG Inference Engine: Llama 3, FastAPI and local embeddings for secure offline document retrieval. **Threat Identifier:** fine-tuned BERT classifier with 89.5% accuracy and 89.2% F1. **Field-to-Invoice:** typed FastAPI service converting field dictation into deterministic invoice JSON.

EDUCATION & CERTIFICATIONS

M.S. Computer Science, Pace University, New York, USA (2025) | **B.Sc. Computer Science,** Savitribai Phule Pune University, India (2022)

AWS Certified Solutions Architect - Associate | AWS Certified Cloud Practitioner
